

Training & Consultancy

Environmental Management Systems

Objective

Develop and implement an environmental management system

Scope

This course introduces participants to environmental and sustainability concepts relevant to business in the 21st century.

Learn how to develop an effective framework for the systematic reduction of environmental risk. The course covers the ISO14001 International Environmental Standards with practical examples to support the key learning outcomes.

Learning Outcomes

- Understand the benefits of having a developed environmental management policy
- Write a management policy that provides a framework for mitigating and managing environmental risks
- Prepare objectives, targets and action plans to ensure policy commitments are met or exceeded
- Be aware of the legal and compliance requirements that may affect your organisation
- Enable your organisation to monitor and control its environmental performance against a set of targets
- Report to stakeholders about your environmental performance

Customised In-House Training
