

## SpilMax<sup>®</sup> Floor Sweeps

**SpilMax<sup>®</sup>** offers a broad range of floor sweeps for many different purposes. All floor sweeps are made from organic cellulose material to ensure environmental protection in both the short and long term. **SpilMax<sup>®</sup>** floor sweeps encapsulate the oil, rather than simply absorbing it. This means that once the liquid has been absorbed, it stays absorbed, preventing the liquid from leeching back into the environment.

**SpilMax<sup>®</sup> Remedial** is designed for use on dirt or land such as sporting venues, lawned areas and any location where soil has been contaminated and requires treatment on the spot.

It is a bioremediation product so when added to contaminated soil the enzymatic action of the bacteria accelerates the natural decomposition of hydrocarbons, effectively returning the altered environment altered to its original condition; with no disposal costs.

Industries that often use this product are:

Utilities

Agricultural

Golf Courses

Construction

**SpilMax<sup>®</sup> Premium** and **SpilMax<sup>®</sup> Natura-Sorb** do not bioremediate. These floor sweeps have been designed for use in workplaces on bitumen or concrete surfaces.

**Premium** is a high quality solution with rapid encapsulation, zero leaching and minimal residue.

**Natura-Sorb** is the economical solution for spill absorption with similar encapsulation to **Premium** but at a slower rate which can be ideal for bulk users.

When used correctly, all contaminated **SpilMax<sup>®</sup> floor sweeps** meet the EPA criteria for disposal at land fill and fulfill the EPA Paint Filters Liquids Test 9095A.

For any further queries about the **SpilMax<sup>®</sup>** range of floor sweeps don't hesitate to contact Chatoyer Environmental on 1300 880 623 or at [www.chatoyer.com.au](http://www.chatoyer.com.au).
