Your permanent solution to storm water pollution

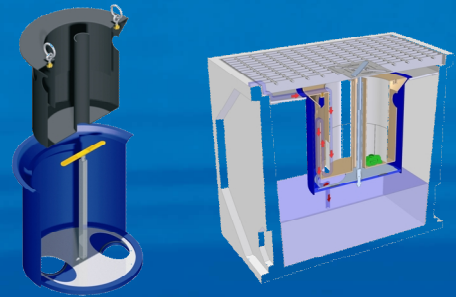

Recently our clientele have been facing similar issues with regards to the management of hazardous spills and the potential for waste and debris to escape their commercial site.

Our innovation...

The SpilMax® DrainSafe is a permanent environmental solution that will set a new benchmark in storm water management and environmental sustainability, enhancing your corporate and public image.

Product features include:

1. 24 hour filtration system to capture waste and debris
2. Easy to manage open/close procedure during a spill to contain liquids and absorb oil

How this will benefit you:

Environmental legislation in Australia covers all water, land, air, noise pollution and waste management in every State. In some cases, breaking environmental law carries serious penalties and even minor accidents can result in prosecution and penalties. The most serious offences carry penalties of up to \$5 million for a company or \$1 million for an individual (including owners, managers, contractors and employees) and/or seven years imprisonment.

Return on investment:

- A permanent fixture adding considerable value to your infrastructure
- Insure against possible penalties relating to the pollution of the environment
- Improve your corporate image to stakeholders, industry officials and government
- Enhance your status with regards to your environmental sustainability standards

The SpilMax® DrainSafe will provide you with confidence; ensuring hazardous liquids do not escape from your site, as well many other corporate, environmental and financial benefits.
