

SpilMax® DrainSAFE Case Study

6-month service results

The SpilMax® DrainSAFE was installed at a Sydney port to ensure hazardous liquids and debris would not escape from their site and pollute the waterways.

A routine service was conducted after 6 months and the results speak for themselves. Not only was sheen oil absorbed from the water flow, but the diffuser had effectively captured and retained debris that should not be entering the stormwater system as shown below.

The SpilMax® DrainSAFE is your permanent solution to stormwater management, providing you with an innovative yet affordable product designed and constructed to be easily installed into existing drain pits.

If you would like to enquire about the SpilMax® DrainSAFE and find out how it can protect your site from stormwater pollution, call us today on 1300 880 623 or visit our website www.spilmax.com.au
