

CONTAINMENT BOOMS

CONTAINS OIL SPILLS AND DEBRIS
IN A VARIETY OF CONDITIONS

Containment Booms are an impervious barrier designed to deflect or contain spills or floating debris. With our standard crumple resistant, closed cell foam flotation chamber and continuous skirt draft, these booms perform very well in rough weather.

These containment booms can be deployed for short or long term periods in harbours, rivers, ponds, dams and other open waterways.

STANDARD FEATURES

Manufactured from heavy duty, hi-vis, UV resistant PVC with load strapping above floats, standard extruded aluminium ASTM F962 z- connectors and continuous chain ballast in PVC pocket.

ADVANTAGES

- Operates in a variety of conditions
- Ideal for a variety of applications
- Cost effective
